

Recent progress in the field of dissemination in INS/Romania

Abstract

The information means power for any people, for any organization. Due to knowledge necessities of people and due to IT evolution appeared the „network of networks” - that we call Internet. The evolution of a society is depending on knowledge and this conducted us to build up a knowledge – based society. Since the Internet was born with its facilities e-mail, e-commerce, e-transaction, e-learning, e-library, e-governance we become an Information society.

To have a knowledge-based economy and society the eEurope initiative is straithegned to fulfill some main priorities in giving for the public a free, fast and safe online access to information, learning and encourage people in using the internet and aware governments by internet benefits in governance.

A huge amount of information is collected, processed, structured by socio-economic themes, stored and finally disseminated for the public via internet. The access to information is feasible by new information technologies means, by new tools, multimedia tools, media channels and defined standards of dissemination; Internet, through its exponential proliferation made it possible.

Romanian NIS has preoccupation in giving access to the statistical information organized in statistical databases through own website. Is a new and modern solution in the web space to give to the public, business world, academic world, international organizations access to a large amount of statistical information.

Statistical information plays an important and well defined role in the information market. The new Information Technologies on the web platform conducted us to new preoccupations in building up new services like e-commerce services on the web to our customers from the business area. This is a quick solution in consulting and purchasing the statistics on -line and has an important contribution in reducing precious time and distance for customers in reaching the desired information and for us also. The web application developed by NIS is user-friendly, accessible to all, affordable, adapted to local needs and external needs in English language is flexible and support sustainable development.

On-line dissemination is a new way for information the society with statistics, grown from customers necessities and we can stop to affirm that this is the future, we have to start to affirm that this is the present. During the time changes of the information needs and the feedback from the public and main users conduct to continuous challenges for adapting and improving the statistical system and dissemination ways to the new requests. Dissemination of the statistical information is depending on the new Information and Communication Technology research and development. The electronic dissemination through internet is and will be the most important solution for the present and the future of the societies.

The solutions for dissemination of the information on the web will contribute in having an information society where everyone can create, access, utilize and share information and knowledge, enabling individuals, community and people to achieve their full potential in improving their quality of life and promoting their sustainable development.
