PREFACE

Publication "Results of the structural survey in enterprises" is developed based on the results of structural business survey and presents the main indicators of business activity in the Republic of Moldova in 2021, including by types of activity, forms of ownership, size classes and regional aspect.

The Structural Business Survey (SBS) is a basic tool for the surveys of the enterprises and is carried out according to the requirements of the European Union Regulation (EU) No. 295/2008 "Concerning structural business statistics" and includes the following economic activities: extractive and manufacturing industry; electricity, gas and water supply; construction; trade; transportation; accommodation and food service activities; information and communications; other market services. Such activities as agriculture, public administration, financial activities and predominantly non-commercial services (education, health and social work activities) are not included (which, according to the provisions of the above-mentioned EU Regulation, are not included in ASA.)

The information is presented without the data on localities from the left side of the river Nistru and municipality Bender.

Abbreviations:

SBS - Structural Business Survey;

CFOJ - Classification of Organizational Legal Forms

CAEM Rev.2 - Classification of Economic Activities in Moldova Rev.2 (NACE rev 2)

CUATM – Classification of Administrative-Territorial Units of Republic of Moldova

NUTS - Nomenclature of territorial statistical units of the Republic of Moldova

Symbols used:

= event did not exist

0.0 = low value

Note:

In some cases, there may occur insignificant discrepancies between the totals and corresponding sums of the components, fact that could be explained by data approximation.

METHODOLOGICAL NOTES

General objectives

The SBS reflects the results of business activity in 2021.

The SBS is a structural statistical sample survey of the enterprises engaged in an economic activity on the territory of the Republic of Moldova.

The structural questionnaire of the enterprises represents the major tool of statistical survey of their activity with the following purposes:

- provides information to characterize the productive and commercial system of enterprises in total at the level of national economy, including by types of activity, forms of ownership, size classes and the regional aspect;
- is an important source of data for the development of National Accounts at national and regional level;
- provides the necessary information for the update the Register of Statistical Units, which is subsequently used for statistical surveys.

The enterprise is the observation unit in the SBS.

The enterprise is defined as the smallest legally constituted unit, which has decision-making autonomy and is organized to carry out, at one or more places, one or more activities for the production of goods and services. Local units that belong to the enterprises are also surveyed by means of the structural questionnaires.

The classification of enterprises by types of activity was carried out in accordance with the Classification of Economic Activities in Moldova (CAEM-2).

ASA is carried out according to the requirements of the European Union Regulation (EU) No. 295/2008 "Concerning structural business statistics" and includes the following economic activities: extractive and manufacturing industry; electricity, gas and water supply; construction; trade; transportation; accommodation and food service activities; information and communications; other market services

In the survey were not included enterprises with the following main type of activity (which, according to the provisions of the above-mentioned EU Regulation, are not included in ASA.):

- · agricultural activities;
- · financial activities:
- · public administration;
- · education, health and social work activities;
- arts, entertainment and recreation.

The classification of enterprises according to the organizational-legal form was carried out in accordance with the Classification of Organizational Legal Forms of the Republic of Moldova (CFOJ). Non-commercial and budgetary organizations were not included in the survey.

The classification of the enterprises according to the form of ownership was carried out in accordance with the Classification of Forms of Ownership (CFP).

The enterprises on the left side of the Nistru and the municipality of Bender were not included in the survey.

Sampling frame

The general sampling frame for all statistical surveys for 2021 included 74,7 thousand statistical units. After excluding from the sampling frame the enterprises, which are not subject of SBS survey, as well as enterprises that were not active for two consecutive years, the reference population for SBS 2021 was **38.8 thousand enterprises**.

Sample design

Sample for the SBS is a stratified sample with simple non-return casual selection. There are the following stratification criterias:

- 1. Economic activity at the level of classes CAEM 2 (4 digits);
- 2. Size class depending on the average number of employees, the size classes are determined: (0-4 employees, 5-9 employees, 10-19 employees, 20 and over employees).

The sampling frame was stratified according to the main type of activity at the level of class and size class of enterprises.

The enterprises in the survey database were classified into several types before calculating the sample volume:

- 1. Exhaustive survey (code 1);
- 2. Atypical (code 2);
- 3. Sample survey (code 3);
- 4. Exhaustive small layers (code 6);
- 5. Exhaustive layers with local units (code 7);

Exhaustive survey has been done:

- · enterprises with an average number of employees 20 and more;
- small layers that have 5 or fewer statistical units;
- enterprises that reported for 2020 two or more local units;
- atypical enterprises (detected by 2 methods: the interquartile range method and the 3 sigma (3σ) method.).

The survey of the rest of enterprises was sampling.

The final strata were created by crossing the following variables: economic activity + size class + type of enterprise according to the type variable.

The sampling at class level was chosen, with the layers formed at the intersection of economic activity at class level (4 signs) and size class (4 groups), interval interquartile range was the method of detecting atypical units and the coefficient of variation at the level of divisions not exceeding 3,5%.

The total sample size for SBS 2021 represented about 14,0 thousand enterprises with a sampling rate of 36%.

The table below shows the distribution of the sampled enterprises by the type of survey.

Distribution of the sample by type of survey

Type of enterprises in the survey	Number of enterprises	Share %	Nr. of layers
Enterprises with an average number of employees 20 and more (exhaustive)	3 383	24,2	436
Small layers (exhaustive)	1 167	8,4	496
Enterprises with two or more local units (exhaustive)	1 487	10,7	492
Atypical enterprises (exhaustive)	2 726	19,5	422
Enterprises with average number of employees up to 20 (selective)	5 197	37,2	520
Total	13960	100,0	2366

Data collection

The questionnaire on the structural survey includes the following compartments:

- · identification information;
- · incomes:
- · consumption and expenses;
- · stocks;
- · information about local units;
- turnover from wholesale and retail sales;

Data is collected directly from enterprises. The questionnaires were completed online (73% of the questionnaires) or submitted on paper to the territorial statistics units by the economic agents.

Data quality

For 2021 were collected about 14,0 thousand questionnaires.

Several rules for data analysis and quality control have been applied:

- Mathematical data control;
- Logical data control;
- Comparison of data with other databases available in NBS;
- Comparing data with similar data in the financial statements:
- Setting maximum limits for certain indicators, for example, turnover, average number of employees, etc.

¹ The sampling rate is calculated as the ratio of the total units surveyed to the total units in the sample base, expressed as a percentage.

Analysis of non-responses and coverage errors

The non-response share for ASA 2021 constituted 2,9%. Liquidated or in the process of liquidation enterprises were found in the data collection process. These were considered over-coverage errors, 64 enterprises that have established themselves as being outside the scope of the survey, due to the change of the main kind of activity or the organizational-legal form that is not the object of the survey, were also included in this category

The rest of the enterprises that were not found were treated as non-responses, assuming that there were no liquidated enterprises, in the process of liquidation or outside the scope of the survey.

Data accuracy

The accuracy of the data is measured by the coefficient of variation. The variables for which it was calculated are the turnover and the number of employees. Most of the coefficients of variation for the main indicators presented in the analytical tables are in the range 0 - 10%, which allows their publication.

The National Bureau of Statistics carried out the whole complex of works: elaboration of the statistical instruments, sample design, training of the necessary personnel for the development of the survey, as well as the data collection and processing.

ACTIVITY OF SMALL AND MEDIUM ENTERPRISES IN 20212

The development of small and medium enterprises are an important factor in ensuring the sustainable development of the country's economy. Thus, these enterprises ensure:

- · creating new jobs;
- producing a considerable share of production and services;
- · expanding individual economic opportunities;
- low requirements by point of view of the institutional constitution, market operation;
- · social stability.

Small and medium-sized enterprises (SMEs) are considered:

- micro-enterprises: up to 9 employees inclusive;
- small enterprises: from 10 to 49 employees inclusive;
- medium-sized enterprises: from 50 to 249 employees inclusive.

According to SBS 2021, SMEs represented 99,6% of all enterprises. The number of employees in the SME sector amounted to 282,7 thousand employees (71,1% of the total number of employees included in the survey). The turnover of the SME sector was 307,4 billion. MDL or 74,6% of the total turnover in the national economy.

Figure 1. The share of enterprises by size classes, %

The small and medium-sized enterprises sector is assigned to enterprises with an average annual number of up to 250 employees (art. 4.5 of the Law on Small and Medium-sized Enterprises no. 179/2016).

ACTIVITY OF ENTERPRISES IN REGIONAL PROFILE IN 20213

The sub-national disaggregation of statistical information on business activity is necessary to track the sustainable regional development.

The 2021 SBS data and the 2021 annual financial reports on similar economic indicators (turnover and the average number of employees) were used to produce statistical information on business activity at the regional level

Regional profile data are prepared in accordance with the Nomenclature of territorial units of statistics of the Republic of Moldova. The calculations are elaborated based on the data of the local units of the enterprises from ASA and the data from the financial statements according to the Methodology for calculating the statistical data regarding the activity of the enterprises in territorial aspect

1. Main indicators of the enterprises by the size class of the enterprises

				by size class		
	Total	0-9 employees	10-19 employees	20-49 employees	50-249 employees	250 and more employees
Number of enterprises, unit	38 783	32 487	3 238	1 921	968	169
